## PROJECTS

### Outrun Chase (HAB-59 2020)

 August 2020 - Present

- It is a fast-paced hyper-casual shooting game with support for both Internet and LAN multiplayer which won the 2nd Prize in HAB-59 Hackathon 2020.
- Developed using the Godot game engine.
- Implemented major gameplay mechanics and optimized it for mobile devices.

### Attendo (A Course Project)

 September 2020 - Present

- An app designed to streamline the attendance marking process in classroom settings by making use of mobile phones to mark attendance over Wi-Fi.
- Written in Dart using the Flutter framework with the networking implemented using Network Service Discovery and TCP sockets.
- I was involved in making screens, implementing networking and managing the project.

### Rootex (SDSLabs)

 April 2020

- Rootex is an advanced C++ 3D game engine using the DirectX 11 Graphics API.
- Implemented the camera functionalities that made it possible to add multiple cameras in a level and made camera movement possible.

## ACHIEVEMENTS

- 2nd Prize winner under gaming category of hackathon HAB-59 2020.
